

How can you account for  
your staff if you don't know  
where they are?

## SmartTrak offers rapid location tracking by phone

SmartTrak helps you track the current location of your staff and any other individuals key to your incident response strategy via their mobile phones.

With SmartTrak, you can track the path of a user and view a breadcrumb trail of their journey and, for added intelligence, provide alerts when tracked mobiles come into close proximity with each other or with a defined point of interest.

Using SmartTrak could not be easier. Mobile numbers can be pre-loaded or keyed individually into the online interface. Within seconds, the location of the SIM is

revealed by way of easy-to-read, multi-view digitised mapping.

As SmartTrak works using a standard mobile signal, it can work where GPS doesn't, such as a block of flats.

SmartTrak is part of the SmartDesk Business Continuity Communication platform. It works on standard mobile phones and smart phones including Blackberry and iPhone.
